Clinical Design Process

# Essential Principles and Practices

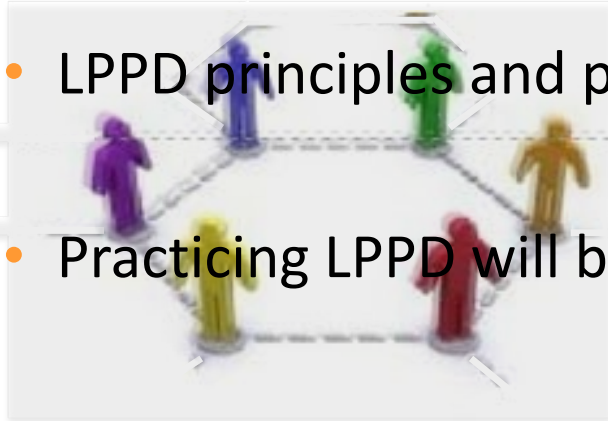

- *People first*
- *Understand - then execute*
- *Design new value streams*
- *Create a framework for success*
- *Constantly learning and improving*
- *Establish an effective management system*

# LPPD is an enterprise activity...

- LPPD is inherently cross-functional and collaborative

- LPPD principles and practices will result in better products

- Practicing LPPD will benefit your organization

# Value creation

- Value creation is a first principle of lean – your “product” is that value
- Kaizen or Rework?
- Or worse....

# LPPD aims to create new value streams

- Intentionally designing every step of the value creating process
- LPPD builds collaboration into the development process
- Process is necessary but not sufficient

# Engage the extended enterprise

- Align your entire enterprise around creating value for the customer
- LPPD methods enables partnering, transparency and collaboration through obeya stand ups, monosukuri teardowns, cross-functional gemba visits...
- Results in much greater value and far better products

# Why stop?

- Collaboration, transparency, working together to create greater value...people like working that way
- Changes perspective - aligned customer focus and enterprise excellence not just disconnected pockets
- Actionable value creating true north

# Getting started

- Lead by example – reach out. Does not have to be a big initiative
- Start small – think about possible pilots
- If your development is not yet cross-functional: pilot specific practices on a single project or just a CDT
- If you already practice cross-functional LPPD: How can you expand LPPD practices: establish a cross-functional steering team, Matched Pairs or Operating Team Meetings
- “Do the experiment” and remember PDCA – first time won’t be perfect

# Sustain

- $MS = LB \times OS$
- OS is “what” we do: Common tools, processes, cadenced events and leader standard work. LB is “how” we do it /our leadership skills and behaviors
- Together they determine the power of your management system
- And your MS determines the course of your organization

# Doing the experiment...

# Doing the experiment...

# Designing a shared future

THANK YOU
