Bonjour à tous,

Je suis très inquiet sur [blurred].com
Ce que je vois aujourd'hui en ligne (j'ai pris le temps de surfer un peu) est bourré de problèmes, comportements bizarres….
Je ferais un point semaine prochaine sur toulouse avec notre équipe pour savoir si ces bugs enlevant tte crédibilité à la plateforme sont déjà référencés, prévus d'être corrigés et si oui à quel date…
En tout cas en l'état de ce que je vois cela me semble assez inexploitable.

History: The Agile Manifesto

At the core, I believe Agile Methodologists are really about [...]

delivering good products to customers by operating in an environment that

[...] actually "acts" as if people were the most important [...]

...as Lean Thinking: delivering better value for customers through more meaningful work for people

"This important book goes beyond teaching the lean tools that have been widely embraced today and reveals the complete—and revolutionary—lean strategy."
—JAMES P. WOMACK, coauthor of *The Machine That Changed the World* and *Lean Thinking*, and founder of the Lean Enterprise Institute

…as Lean Thinking: delivering better value for customers through more meaningful work for people
"Lean thinking combats big company disease by spurring managerial thinking

to provide meaningful work to people who work mindfully,

in order to always deliver better value for customers"

It's not a coincidence
SCRUM, a big influence in the agile movement, came from Takeuchi and Nonaka

The most iconic example of scaling "individuals and interactions" in an Agile way is probably the open-source project Linux.
It started in 1991, with Linus Torvalds posting a message on the Minix Newsgroup

```
From: torvalds@klaava.Helsinki.FI (Linus Benedict Torvalds)
Newsgroups: comp.os.minix
Subject: What would you like to see most in minix?
Summary: small poll for my new operating system
Message-ID:
Date: 25 Aug 91 20:57:08 GMT
Organization: University of Helsinki

Hello everybody out there using minix -

I'm doing a (free) operating system (just a hobby, won't be big and
professional like gnu) for 386(486) AT clones.  This has been brewing
since april, and is starting to get ready.  I'd like any feedback on
things people like/dislike in minix, as my OS resembles it somewhat
(same physical layout of the file-system (due to practical reasons)
among other things).

I've currently ported bash(1.08) and gcc(1.40), and things seem to work.
This implies that I'll get something practical within a few months, and
I'd like to know what features most people would want.  Any suggestions
are welcome, but I won't promise I'll implement them :-)

                Linus (torvalds@kruuna.helsinki.fi)

PS.  Yes - it's free of any minix code, and it has a multi-threaded fs.
It is NOT protable (uses 386 task switching etc), and it probably never
will support anything other than AT-harddisks, as that's all I have :-(.
```

+
+       In order to keep things easy for the maintainers please try to
+follow the guidelines given. Not all of these guidelines matter for every
+trivial patch so apply some common sense.
+
+1.     Always _test_ your changes however small on at least 4 or 5 people,
+preferably many more.
+
+2.     Try and release a few ALPHA test versions to the net. Announce them
+onto the kernel channel and await results. This is especially important
+for device drivers because often thats the only way you will find things
+like the fact version 3 firmware needs a magic fix you didnt know about, or
+some clown changed the chips on a board and not its name (Don't laugh look
+at the SMC etherpower for that).
+
+3.     Make sure your changes compile correctly in multiple configurations.
+
+4.     When you are happy with a change make it generally available for
+testing and await feedback.
+
+5.     Make a patch available to the relevant maintainer in the list. Use
+'diff -u' to make the patch easy to merge. Be prepared to get your changes
+sent back with seemingly silly requests about formatting and variable names.
+These aren't as silly as they seem, one job the maintainers (and especially
+Linus) do is to keep things looking the same. Sometimes this means that

The basic solution
------------------

Figure out a means by which Linus can surround himself with some number
of people who do part of his job.  Add tools which make that possible.
```

Problems continued and contributions were lost, until in 2002 Linus decided to adopt BitKeeper. The situation immediately improved
