

# Empowering Innovation: Unlocking Business Potential with No-Code Tools

\_zapier

## Presenter:

Philip Lakin

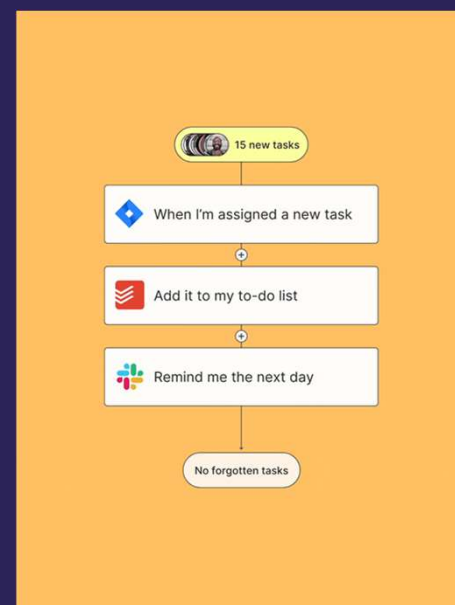

Head of Enterprise Innovation @ Zapier

## Why No-Code? The Business Case

? *60% of automation projects fail because they get stuck in IT backlogs.*

? *What if your team could build solutions in hours, not months?*

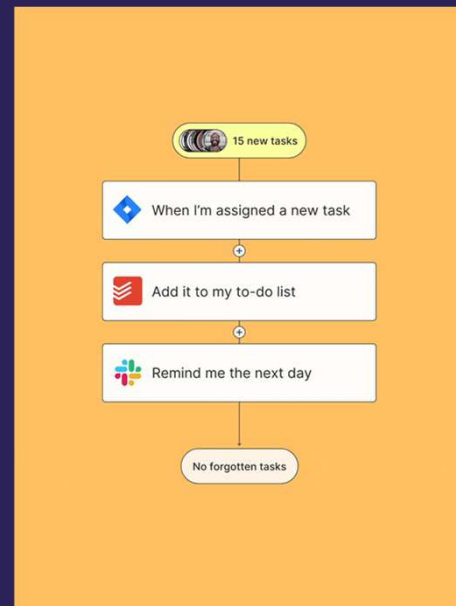

💡 **No-code enables business users—not just developers—to create automations & internal tools without waiting on IT.**

## No-Code + Lean Thinking: A Natural Fit

- ✓ Eliminates Waste – Reduces manual work, rework, and delays
- ✓ Empowers Teams – No more waiting on IT or external developers
- ✓ Accelerates PDCA Cycles – Enables rapid Plan-Do-Check-Act iterations
- ✓ Faster Innovation – Shortens lead time from problem to solution

The result? Less waiting, more doing, and faster impact. 🚀

## What You'll Gain Today

- ✓ Understand no-code vs. spreadsheets vs. SaaS
- ✓ Learn how AI enhances no-code
- ✓ Watch a live demo solving a real-world challenge
- ✓ Participate in a hands-on exercise

You at the end of this workshop 🙌

## Who Am I?

⚡ 8+ years in automation, operations, & internal systems

📊 Scaled Ops at Compass → Onboarded 15,000+ real estate agents

🚀 Built NoCodeOps → Helping ops pros streamline processes

👉 Acquired by Zapier → Now the Head of Enterprise Innovation

Philip Lakin  
Head of Enterprise Innovation @ Zapier

## Before we move on...

Think of a process in your work that has **one or more** of the following:

- ✅ **Spreadsheets** tracking information
- ✅ **Emails** for approvals or updates
- ✅ **Manual work** like copying/pasting data
- ✅ **Notifications** keeping people informed

💡 The more it has, the better! Write it down—we'll come back to this shortly.

## The Problem with Existing Solutions

When teams need to manage processes, they typically have two options:

Approach	Best For	Limitations
<b>Spreadsheets</b> 📊	Quick, informal tracking	Breaks at scale, manual work
<b>SaaS Tools</b> 🏢	Pre-built software for known needs	Rigid, can't customize

💡 But what if you need something in between?

- More **flexible** than SaaS
- More **scalable** than spreadsheets
- Without waiting on IT to build custom software

👉 That's where no-code comes in!

## No-Code – The Best of Both Worlds

No-code bridges the gap between spreadsheets and SaaS by letting you build custom workflows, apps, and automations—without coding.

🚀 Why No-Code?

- ✓ Faster Solutions – Build in hours, not months
- ✓ Empowers Problem-Solvers – No waiting on IT
- ✓ More Flexible Than SaaS – Tailor workflows to fit your needs
- ✓ Scales Beyond Spreadsheets – Automate, track, and integrate without manual work

# Live Demonstration – No-Code in Action

## Real-World Challenge: Tracking & Managing Internal Ideas Efficiently

✗ **Before:** Ideas lost in messy email threads, scattered spreadsheets, and slow approvals

✓ **After:** A centralized, no-code system that captures, categorizes, and updates stakeholders automatically

🔗 **Live Demo:** Building an Internal Idea Management Tool in Zapier Systems

# From Product Requirement Doc to Custom Business Software in Minutes

## Internal Idea Management Tool – Zapier Systems

### Process:

1. **Submission:** Employees submit ideas with a form capturing Title, Description, Category (Product, Process, HR, IT, etc.), Priority (Low, Medium, High), and Stakeholders.
2. **Storage & Tracking:** Ideas are logged in a Zapier Table, tracking status (New, Under Review, Approved, Implemented), assigned reviewer, and notes.
3. **Automation & Notifications:**
  - Slack & Email alerts notify stakeholders upon submission and status changes.
  - Reviewers auto-assigned based on category.
  - Reminders & escalations if ideas remain "Under Review" or "Approved" for too long.
4. **Execution in Asana:**
  - Approved ideas auto-create Asana tasks in the correct project.
  - Tasks are assigned with priority and due date.
  - Asana task updates sync back to Zapier Tables for tracking.
5. **Visibility & Tracking:** A Zapier Interfaces dashboard gives real-time updates on ideas and execution.

### Who's Involved:

- **Employees** – Submit ideas.
- **Managers/Reviewers** – Review, approve, or reject ideas.
- **Stakeholders** – Receive notifications about relevant ideas.
- **Implementation Teams (Asana users)** – Execute approved ideas and track progress.

### What should a no-code solution do:

- ✓ Provide an intuitive submission form via Zapier Interfaces.
- ✓ Store and categorize ideas automatically in Zapier Tables.
- ✓ Auto-assign reviewers and notify stakeholders via Slack & Email.
- ✓ Create Asana tasks for approved ideas with auto-assigned teams.
- ✓ Sync status updates between Asana and Zapier Tables for full visibility.
- ✓ Offer a dashboard view for both employees (tracking submissions) and managers (prioritization & approvals).
- ✓ Send reminders/escalations for ideas stuck in review or pending implementation.

### How should users interact with it:

- **Employees:** Submit ideas via a simple Zapier Interfaces form and track their status in the dashboard.
- **Managers/Reviewers:** Receive notifications, review submissions in Zapier Tables, approving/rejecting ideas, and monitor pipeline via Interfaces dashboard.
- **Stakeholders:** Get automated updates on relevant ideas through Slack & Email.
- **Implementation Teams:** Work on Asana tasks for approved ideas, with status syncing back to Zapier for transparency.

This end-to-end no-code system ensures ideas are captured, reviewed, executed, and tracked seamlessly, keeping stakeholders informed and workflows efficient. 🚀

Demo Time

## Your No-Code Product Requirement Doc

✍ Write down key details about your process you selected earlier:

- 1 What's the process? (What happens manually today?)
- 2 Who's involved? (Who needs access or notifications?)
- 3 What should it do? (Automate? Track? Notify?)
- 4 What data is needed? (Forms, fields, inputs?)
- 5 How will people interact? (Dashboard, triggers, forms?)

Any  
volunteers  
to build live  
with me?

## Getting Stakeholder Buy-In for No-Code

### 📌 How to Convince Your Team to Use No-Code:

- ✅ **Show quick wins** → Automate small tasks first
- ✅ **Tie it to business goals** → Efficiency, cost savings, innovation
- ✅ **Scale responsibly** → Start with departmental use cases

💡 **Quick Tip:** You can always build an MVP with AI-Generated Placeholder Data (I'll show you how)

## Involving IT for Scalable No-Code Success

- ◆ **Start small – Automate one workflow at a time**
- ◆ **Involve IT early for:**
  - Security & Compliance – Data access, permissions, governance
  - Scalability – Ensuring automations don't create tech debt
  - Integration Support – Connecting systems beyond no-code limits
- ◆ **Ensure visibility – Track who builds what**
- ◆ **Align teams – Ops & IT collaboration drives long-term success**

💡 **The best no-code initiatives balance speed with IT oversight!**

## No-Code = Faster, Smarter Workflows

🔗 **Key Takeaway:** No-code empowers you to build, automate, and scale—without IT bottlenecks.

### ✅ **Your Next Steps:**

- ◆ **Choose one manual process to automate this week.**
- ◆ **Build it with a no-code tool (Zapier, Airtable, Glide).**
- ◆ **Track how much time it saves—then scale from there.**

💡 **Start small, move fast, and see the impact!** 🚀
